SMILE DENT STUDIO SPECIALISTS

At Smile Dent Studio, we have worked very hard to create the right team to deliver high quality patient care in a caring and supportive environment. We are dedicated to quality and excellence; we have management systems which ensure that we deliver quality service consistently.

SMILE DENT STUDIO SPECIALISTS

Prof. Dr. Tancan UYSAL

His clinical interests include fixed orthodontic treatments with metal and ceramic braces, self-ligating braces, lingual orthodontics, Invisalign (orthodontic treatments with clear aligners) treatments and rapid maxillary expansion.

Prof. Dr Uysal is a Professor and Clinical Director of Orthodontics in Smile Dent Studio. He attended to professorship in 2011 and he worked as the dean and the vice rector of İzmir Katip Celebi University, in Turkey. He has been to Oulu University Finland for a while, for the teaching staff mobility program.

He has published over 150 articles in SCI and SCI-expanded journals, presented 100 papers at international meetings, and supervised more than ten PhD theses. He has given a number of lectures in national and international meetings, on different topics of orthodontics.

He is on the Editorial Boards of American Journal of Orthodontics and Dentofacial Orthopedics and Progress in Orthodontics, and member of the advisory boards of several orthodontic high impact factor journals and other dental journals.

Located in the most prestigious district of İzmir, Smile Dent Studio offers the best dental care with dedicated patient services, state-of-the-art diagnostics and surgical techniques.

She had worked in healthcare tourism in Kuşadası and Fethiye, where she provided dental treatment and smile design to foreign patients, and gained expertise in digital smile design, all-on-4 implant supported prosthesis applications, from 2019 to 2022.

SMILE DENT STUDIO

TREATMENTS

We provide a large range of dental services including routine work such as examinations, fillings both basic and cosmetic, root fillings, extractions, dentures, crowns and bridges. We also provide specialist and cosmetic treatments such as teeth whitening, veneers, smile makeovers, teeth straightening including Invisalign and Implants. In this catalogue you will find a list of treatments that are most likely to be demanded by our prospective patients from other countries.

LAMINATE VENEER

Porcelain is a non metal, inorganic material possessing glass like properties and resembling tooth enamel. Porcelain veneers are extremely esthetic, relatively non invasive and exhibits best tolerance in oral environment. Laminate veneers can only be applied to front surface of your teeth. (can be applied to max. of 10 upper and 10 lower jaws.) The thickness of laminate veneers are generally 0.5- 1.2 mm, that means if you compare to eggshell, laminate veneer has two times thicker than it. When your teeth are stained, damaged or slightly chipped teeth, we advise you to consider laminate veneers. Also small gaps can be closed with it. Eventhough, laminate veneers are thin, it makes a very strong and durable surface. An instant Hollywood smile will be inevitable without compromising the healthy tooth structure.

Standard Laminate Empress Dental Veneers

The standart laminate empress veneers are crafted by an outsource laboratory. Our cosmetic dentist takes your dental impression and this dental impression is sent to a local A+Grade laboratory to craft the laminate veneers. After laminate veneers are crafted, they are brought back to our clinic for your fitting. If alterations are needed, the laminate veneers are return back to the lab for detailed adjustments before your final fitting. All materials such as our laminate empress veneers are crafted in our A+ grade laboratory which is known for dental perfection and success. It's important not to forget, the ability of a cosmetic dentist is not only aspect of your treatment, but also the quality of the crowns used in your dental bridge is vitally important to assure a best final result in aesthetics and terms of fit. We use only the best materials that are provided from all around the world.

E.MAX© Laminate Veneers (Premium Selection)

E.max© Laminate Veneers are an all ceramic type veneer with semitransparent colour, that compounded with more durability and strenght. This veneer is made of a single lithium ceramic block which is a top grade material. E.max© provides you a charming appearance assuring they comply with the rest of your teeth and which makes it highly considered important veneer. Not only it's delicate in appearance but also it's a glass ceramic veneer and tough, enduring. (approx. 2,5 times the strength of CEREC® ceramic veneer. For the reason that E.max© Laminate Veneer is the perfect match with your natural teeth and most durable, strongest material itself, it's longevous and improbable to crack or fracture if compared with too many other types. E.max© Laminate Veneers are made from a pure ceramic block and also provide you a smile with in every shade including Hollywood white. If you need only a single E.max©, our dental team can also apply shading, therefore your new crown is in conformity with surrounding teeth. In this situation, it is not possible to notice which is the crown or your natural teeth.

"For covering the front surface of the tooth to make it seems more aesthetics in terms of shape and colour."

DENTAL CROWNS

Dental crowns are recommended to repair teeth that have been damaged by decay or injury. They are also frequently used to restore dental implants and support dental bridges. In some cases, your existing teeth are abnormally shaped or if you are not happy with appearance of them, that can be recommended for a smile makeover.

Dental crowns are also known to be a full Dental Veneer. They are also frequently used to restore dental implants and support dental bridges. Made of ceramic or metal, the crown is a tooth-like cap that helps to restore the beauty and function of teeth that are partially damaged but not badly enough to warrant complete replacement. Crowns allow us to amend the shape of your tooth completely, adjustments that are sometimes beyond the capability of a Laminate Veneer. Crowns can be sculptured to bind your existing teeth and close the gaps. When compare to another dental treatments such as lumineers, they are more durable. Dental Crowns are fabricated aesthetically to reflect like natural teeth, and mimic the shape, colour and size of the teeth surrounding and also protect your tooth underneath, preserving your own tooth for a long time.

Zirconium Porcelain Crowns (Zirconia)

Zirconium porcelain crowns are highly durable, excessively tough and aesthetically pleasing. This product compose of a permanent White metal with porcelain covered to the outside, creating the natural look of a tooth. In some cases, we prefer to use 100 % zirconium for creating crowns without no need to porcelain. Positive side of this type crowns is that you will never see a black line should your gums recede in time. You will see always the crown appear white at the gum line. When the crown is made up from %100 white materials, the teeth has much better transparency. Because of free from nickel, zirconium porcelain crowns are always healthy if you compared to metal porcelain. When you smile, there will be more aesthetical and pleasing look and in this conclusion we recommend using zirconium porcelain crowns in your treatment for your front teeth or the number of teeth shown along your smile line.

Metal Porcelain Crowns (PFM)

Known as PFM, Metal porcelain crowns are the product of a combination between porcelain and metal crowns. They are not suitable for all people and all positions within dental area. They are durable and cosmetically sound. The core of the crown usually made of a nickel based grey metal with an overlay of white porcelain which provides a natural and tooth like appearance. If you prefer metal porcelain crowns, it's recommended you to replace them after 6- 7 years to sustain the health of your teeth and gums. It's suitable to use dental crowns on the side or back teeth and over dental implants. All materials such as metal porcelain crowns are crafted in our A+ grade laboratory which is known for dental perfection and success. It's important not to forget, the ability of a cosmetic dentist is not only aspect of your treatment, but also the quality of the crowns used in your dental bridge is vitally important to assure a best final result in aesthetics and terms of fit.

"Teeth that are damaged or broken. Crowns can be sculptured to bind your existing teeth and close the gaps."

DENTAL IMPLANT

A dental implant is an artificial tooth root that is placed into your jaw to hold a replacement tooth or bridge. Dental implants may be an option for people who have lost a tooth or teeth due to periodontal disease, an injury, or some other reason.

If you struggle to cope with your existing dentures, or don't like your gap, the most natural solution is dental implant. To replace teeth already missing or are in need of replacement, a dental implant is a titanium screw that is placed within the jawbone.

Because titanium is known to integrate with your bone, implants are made of titanium. Implant forms are like artificial tooth root which anchors in a new dental crown. If multiple teeth missing along the same row, implant bridge can be attached to the implants. The final look and feel will be natural, because the implant fuses to the jawbone. Titanium screw is implanted into the jawbone; in addition to the implant abutment (attachment which connects implant to the crown) and porcelain crown itself to finish the treatment. Smile Dent Studio always gives you a service that is all inclusive of all costs involved to your treatment, our implant price includes cost of abutment, assuring no hidden costs.

How Many Dental Implants do I need?

Usually we do not prefer to replace every missing tooth with dental implant. If you have no teeth on your upper jaws and lower jaws, we generally place 6 implant along the upper and lower jaw, 12 in total. The implants for the each jaws (14 along for each) supports a full set of 28 teeth.

In the case of having a gap that 3 or 4 teeth missing along the same row, we place two dental implants and these supports three or four dental implant bridge. And if you have just one tooth missing, we place a single dental implant and crown.

The treatment can be finished in two short sessions. The first session is for placing of dental implants. You should wait for minimum three months before your permanent implant crowns can be fitted after your implant placement.

Smile Dent Studio Clinic uses titanium implants which made from 100 % grade 4 titanium. Titanium as it is extremely durable, and lightweight, is used for dental implants. This means it will not wear out and is hard to be rejected by your body. There are different types of titanium, used for various purposes such as building, industrial supplies and medical supplies, etc... Only 4 grade or 5 grade of titanium should be used in medical field. As Smile Dent Studio, we give a guarantee that we only use premium dental implants, made from 100% titanium.

"If you struggle to cope with your existing dentures or don't like your gap, the most natural solution is dental implant."

TEETH WHITENING

Teeth whitening is a form of dentistry and should only be carried out by a dentist or another regulated dental professional, such as a dental hygienist or dental therapist, on the prescription of a dentist. If you want to have a much whiter smile in a short time, laser whitening is one of the fastest answer for your request. First step of the treatment process is applying a higher concentration of whitening gel to teeth and activating the gel with high density plasma arc light. The noticeable change in your teeth colour will be seen at the end of the appointment.

The process of laser teeth whitening makes your teeth get back to their original shade. In this process the colour of shade can not be your choice. To achieve the max.result mostly we carry out two sessions till 40 minutes per each one.

For the reason that dental clinics in Europe prefer to use a whitening gel contains max. 6% strength hydrogen peroxide, the end result is not so satisfying, the effect will be very little on the colour of your teeth. At our dental clinic, we prefer to use a product which contains 25% - 40% from maximum results. Of course this strength of product is only able to be determined by a Dental Professional in a clinic with the appropriate expertise and technology, and outside of the UK and European Union.

INVISALIGN

Invisalign aligners are the clear alternative to metal braces for adults and teens. These clear aligners are the virtually invisible way to improve your smile. Your doctor will examine your teeth and show you what Invisalign treatment can do for you. From the first day of treatment to the last, you're never on your own your doctor will be with you every step of your way.

Aligners tend to appeal to patients who want straight teeth but fear braces or don't want others to notice them. Braces have the advantage of being able to fix the worst cases, but they can't be removed until treatment is finished. By contrast, patients can take aligners out for any reason, including eating, drinking and romantic encounters, though they're supposed to keep them in for at least 22 hours a day to maximize effectiveness.

People are demanding more and more the convenience and the opportunity that plastic offers versus wires and brackets. About 12 million people globally begin orthodontic treatment yearly, including four million in the U.S., and some 90 percent of them get braces

Invisalign® straightens your teeth without wires and brackets, using a series of clear, customized, removable appliances called aligners. It's virtually undetectable, which means hardly anyone will know that you're straightening your teeth.

The Invisalign System combines advanced 3-D computer graphics technology with 100-year-old science of orthodontics. Invisalign aligners are designed to move your teeth in small steps to the desired final position prescribed by your orthodontist. Each aligner is precisely calibrated and manufactured to fit your mouth at each stage of the treatment plan.

"enjoy the comfort of clear aligners..."

MODERN CLINIC

SmileClinic handles all of your transportations between your hotel and clinic during your stay here with us.

TRAVEL & ACCOMMODATION

Izmir was once the ancient city of Smyrna, but is now a developed tourist destination surrounded by lush green mountains and set by a tranquil bay. The historical hub has a range of ancient buildings, castles and museums to visit.

PLACES TO VISIT HIGHLIGHTS

The western part of Turkey that reaches out to Europe. The city that looks hundreds of years forward with a 8.500 year history. The city for which Darius built the Persian Royal Road in the 5th century BC... The pearl of the Aegean that warms up with the hot springs of Balçova, adorned with the Bird Paradise, architectural masterpieces and unique beaches... The home of one of the Seven Wonders of the World, the Temple of Artemis; Asklepon the healing center of the ancient history, the Celsus Library and the Temple of Zeus. The unique city in which culture and history comes together.

House of Virgin Mary

House of Virgin Mary is located on the top of the "Bulbul" mountain 9 km ahead of Ephesus, the shrine of Virgin Mary enjoys a marvelous atmosphere hidden in the green. It is the place where Mary may have spent her last days. Indeed, she may have come in the area together with Saint John, who spent several years in the area to spread Christianity.

Ephesus

Ephesus, one of the most famous cities in antiquity, was founded on the harbor where the Küçük Menderes (Kaistros) River flows into the sea. Selçuk grew to be an important city because of its fertile fields well-suited to agriculture, because of its location at the center of an important commercial crossroads with connections to the East, and because it was a significant religious center both in the polytheist period and the Christian era.

Pergamon

The first settlement in Pergamon, meaning castle, is Acropolis. It welcomes visitors to the city with all its glory. Today, you can get up to Acropolis with a cable car, with an amazing view of Pergamon along the way. Acropolis is at a height of 300 meters. The palaces of the Pergamon kings, the theater, holy grounds, temples, the agora, gymnasium, heroon and other Roman Era remnants can be found on this magnificent peak.

Alaçatı

Alaçatı was ranked 8th on the "31 Must-See Places on Earth in 2010" list by The New York Times. The area is considered to be one of the three most important surfing points on earth along with the Canary Islands and Cape Verde. With its deep blue sea, houses with bougainvillea hanging from the windows and cobblestone pavements, Alaçatı is a town of tales from the 1800's.

STAY IN TURKIYE

Payment plans and options can be discussed and adapted to the needs of the patient as required. Smile Dental Studio maintains its status as a competitively priced facility in the market.
